

New Hosted VoIP Deployment Option

Question: Does your Hosted Provider offer you a clear and simple path towards ownership and control of your VoIP solution?

Answer: NetSapiens does.

We provide...

- **Hosting and Management** of your initial VoIP deployment
- **Choice** of hosting within our network facility or your network facility
- **Easy Migration** to facilities-based **ownership** if and when you are ready!

At NetSapiens, we believe that a facilities-based approach can benefit our customers in the long term because of network and service control. We also recognize that a hosted, seat-based model is often advantageous to service providers needing a low risk entry into the market. With our new model, we provide the best of both worlds. Services can be hosted from either the NetSapiens network or yours using the same per-seat pricing. If and when you decide to take over the platform, the migration is as simple as switching to a session-based pricing model. We make the transition a SNAP!

ABOUT NETSAPIENS

NetSapiens offers complete VoIP solutions for smaller service providers looking to offer hosted multimedia applications. As a well-established developer of next generation communications apps, we have purpose-built an advanced Softswitch & Application Platform from the ground up. Which, combined with our Deployment Expertise, we are able to offer complete solutions for our service provider customers.
